Mobile Technology Squared

We work closely with DOGS to understand their specific operational needs for the clients site and then to customize and implement our technology so that it works specifically for the client without changing the clients operational platform.

DOGS utilizes this technology to ensure staff safety and client satisfaction. When partnering with DOGS you can assure a Safe, Sound & Secure Site.

MT2 specializes in providing training and seamless implementation so that integration is not disruptive to existing operations. Partnering in the transition is may easy because MT2 has been there before.

Panic Button

A dedicated panic button alerts Management to emergency situations and allows for quick response

Reports

Generate and export critical operational information on demand 24/7

The following list of Top 10 Business Security Tips can help protect and enhance your company's security no matter the type or size of business you may have. These basic principles apply to manufacturers, retailers, office buildings and even the sole-proprietor.

- 1) Develop, implement and periodically revisit your company's security and safety plans. Have all employees sign an agreement that they will adhere to the policies and that they understand the consequences of violating those policies. Place a copy in their employment file. If you don't have any security/safety plans, write them, (examples can be found on the internet), or have them written for your company by a security consultant.
- 2) Have an emergency plan at home and your business. This should include what to do and who to notify in the case of any emergency such as fire, theft, robbery, hurricane, tornado, etc.
- 3) Shred EVERYTHING!!!
- 4) Maintain good data hygiene. Protect passwords, change them often and DO NOT write them down and leave them unsecured!
- 5) Install and maintain adequate locks on all doors, windows and storage areas. This includes laptops, desktop computers, PDA's, file cabinets, etc.
- 6) Install and maintain adequate lighting on the exterior perimeter of your building(s). This includes back doors, loading docks and parking lots.
- 7) Maintain a small amount of lighting on the interior of your business after hours so that passersby such as police, security and customers can see into your business.
- 8) Ensure an uncluttered and unobstructed view into your business. Thieves/Burglars are attracted to businesses where they can't be seen from the street.
- 9) Have all employees secure their personal belongings in their desk, file cabinet, closet or lockable container.
- 10) Install a chime/door bell to alert you whenever you have visitors/customers at your business.

At DOGS we believe in ensuring all businesses are Safe, Sound & Secure

Message From DOGS Management

The management team would like to thank all readers for taking the time to read the fifth edition of our newsletter.

We hope that this issue provided valuable information on our our new partnerships and on how to secure your business.

DOGS will be providing Security Services to the Drumheller and Red Deer area starting March 1, 2011

DOGS has decided to go into smaller towns in Alberta to ensure they can take full advantage of trained guards, alarm systems & camera installs.

At DOGS we believe in PROACTIVE SOLUTIONS rather than REACTIVE SOLUTIONS.
